

Spectral Superposition: Dark Matter Analysis Dashboard

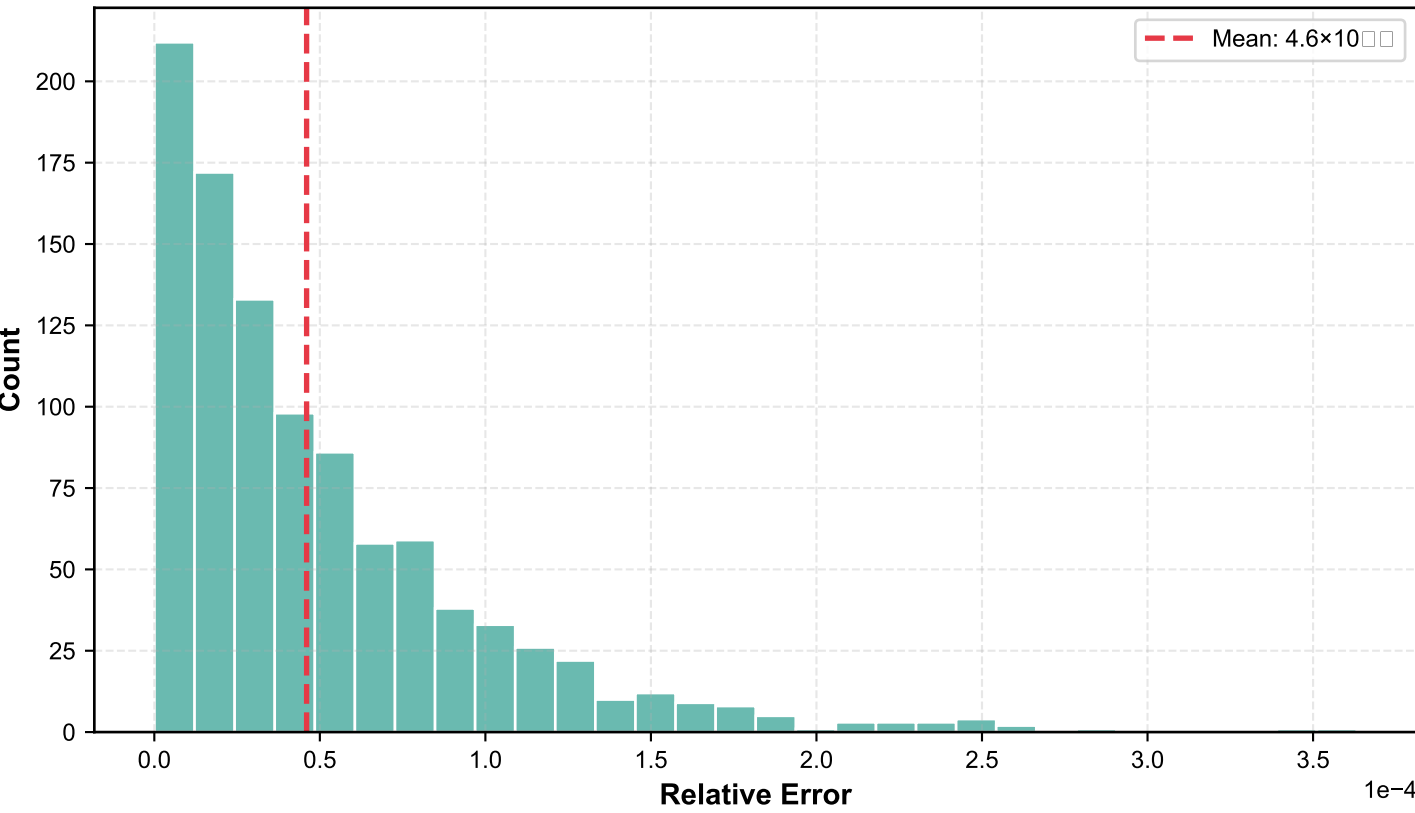

A. Global Dark Matter Law: $D = \alpha N$

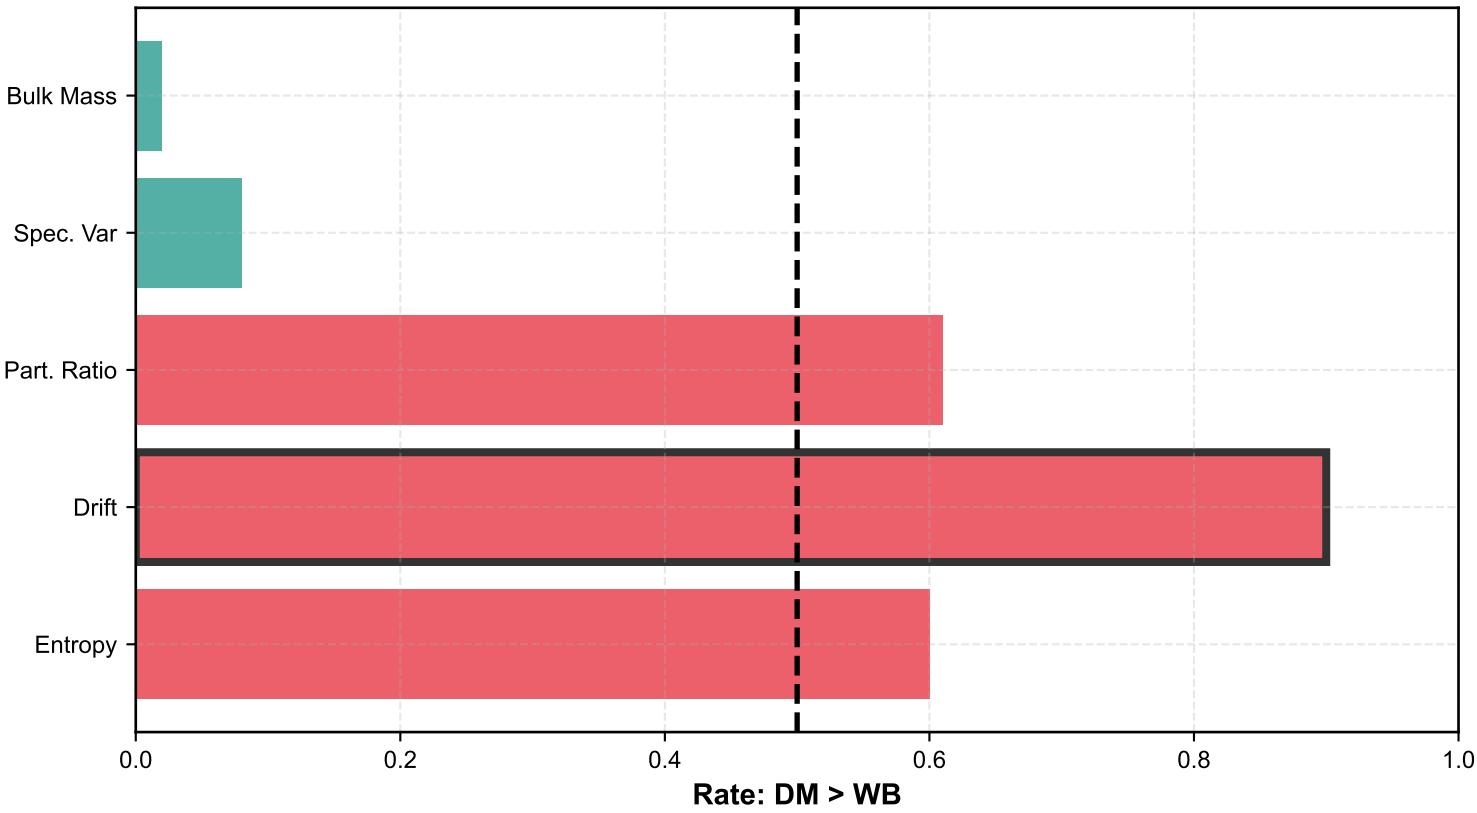

B. Phase Transition at $s \approx 0.28$

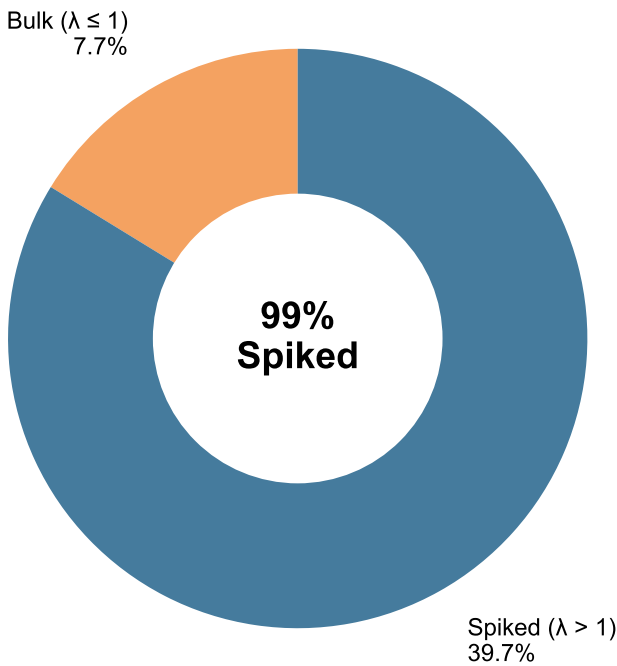

C. Spectral Measure $\kappa = \sum p_i \lambda_i$ Validation

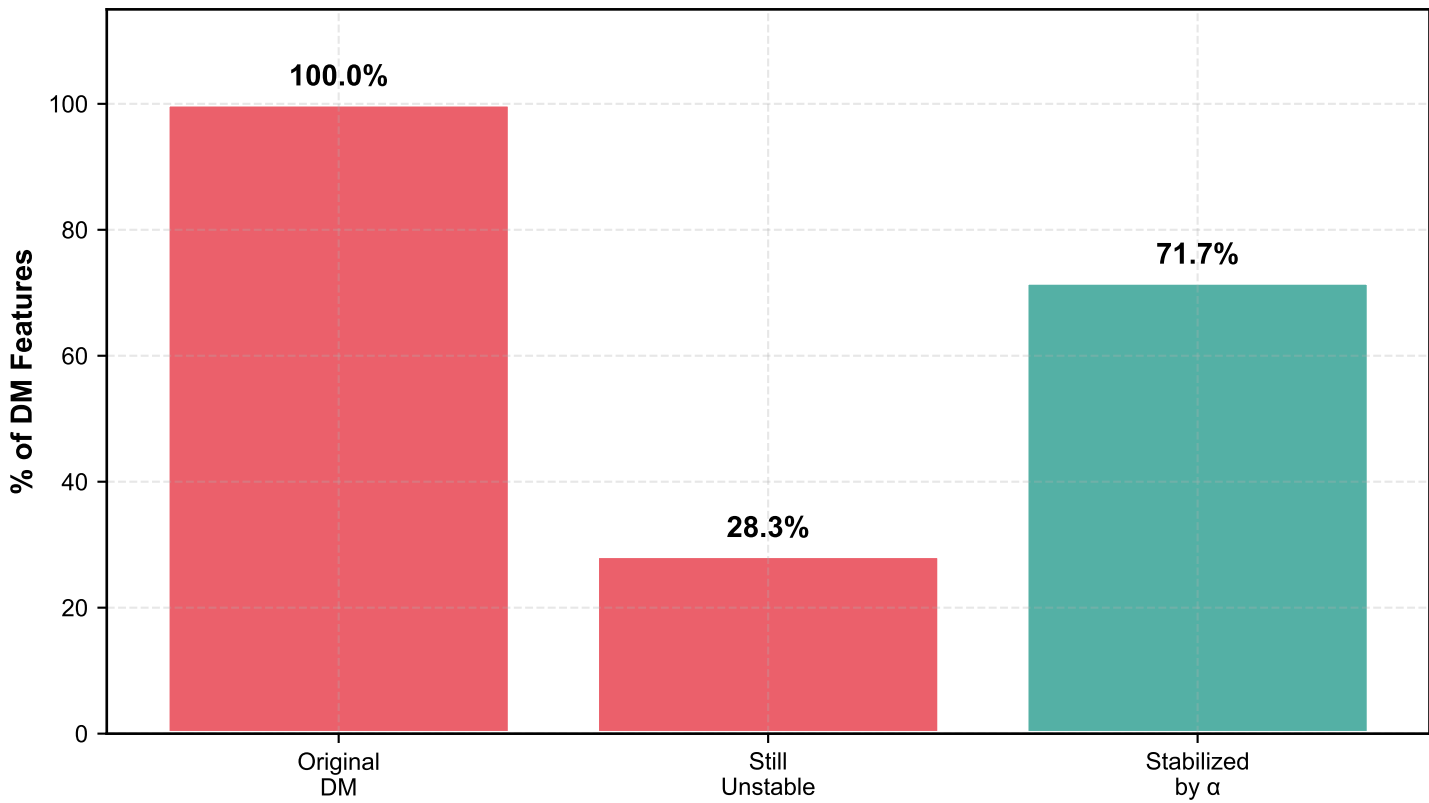

D. Drift: Primary DM Discriminator

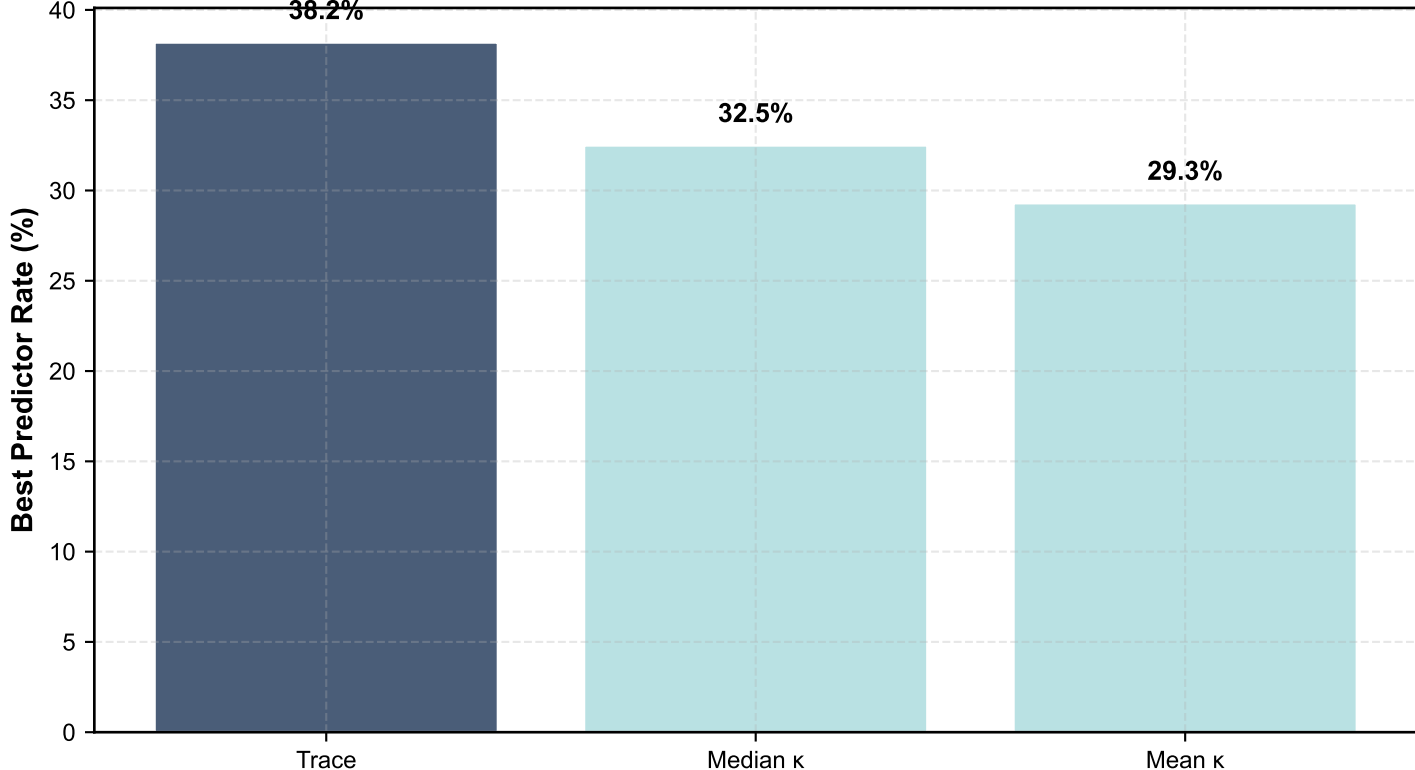

E. DM Concentrates in Spiked Eigenspaces

F. α -Normalization Stabilizes 72% of DM

G. Trace Best Predicts $\alpha(t)$

H. Key Findings Summary

Metric	Value	Interpretation
Overall DM Rate	35.4%	One-third of features
Critical Sparsity	0.28-0.30	Phase transition
Cross-sectional R^2	0.914	Strong $D = \alpha N$
Stabilization Rate	71.7%	α -norm works
DM in Spiked	99.1%	Not bulk phenomenon
Drift Effect Size	$d = 0.40$	Strong discriminator
